PC CONTROL COMMAND

ABOUT THIS REFERENCE

All descriptions in this PC CONTROL COMMAND reference are for the users convenience only. **KENWOOD** will not support or warrantee this documentation in any way.

HARDWARE DESCRIPTION

The TS-480 transceiver uses a full-duplex, asynchronous, serial interface for communicating through the male 9-pin D-sub connector. Each data is constructed with 1 start bit, 8 data bits, and 1 stop bit (4800 bps must be configured as 2 stop bits). No parity is used. The pinout and the pin functions of the **COM** connector on the transceiver are shown below:

COM Pin No.	COM Pin Name (Ref.: Computer)	Function (Ref.: Transceiver)	I/O
1	NC	—	—
2	RXD	Transmit data	Output
3	TXD	Receive data	Input
4	NC	—	—
5	GND	Signal ground	
6	NC	—	—
7	RTS	Receive enable	Input
8	CTS	Transmit enable	Output
9	NC	—	—

RXD: Transmit data is serial data transferred from the transceiver to the computer.

TXD: Receive data is serial data transferred from the computer to the transceiver.

GND: Signal ground pin

RTS: This signal is applied to the transceiver. It is used to inhibit transmit data from the transceiver when the computer is not ready to receive data. Transmit data is inhibited when the level is low.

CTS: This signal is applied from the transceiver. It is used to inhibit transmit data from the computer when the transceiver is not ready to receive data. Transmit data is stopped when the level is low.

CONTROL OPERATION

Most computers handle data in the form of “bits” and “bytes”. A bit is the smallest piece of information that a computer can handle. A byte is composed of eight bits. This is the most convenient form for most computer data. This data may be sent in the form of either serial or parallel data strings. The parallel method is faster but more complicated, while the serial method is slower and requires less complicated equipment. The serial form is, therefore, a less expensive alternative.

Serial data transmission uses time-division methods over a single line. Using a single line also offers the advantage of reducing the number of errors due to line noise.

Only 3 lines are required theoretically for control of the transceiver via the computer:

- Transmit data
- Receive data
- Ground

From a practical standpoint, it is also necessary to incorporate some means of controlling when this data transfer will occur. The computer and transceiver cannot be allowed to send data at the same time! The required control is achieved by using the RTS and CTS lines. To interface between the TS-480 transceiver and a PC, use a commercially available cable with a DB-9 female connector at each end. Each connector pin must be connected to the same pin number at the other end (a straight cable).

To control the transceiver from a PC, utilize the general purpose terminal program to send commands to the transceiver. The transceiver responds the command accordingly.

For example, the transceiver is placed into the transmit mode whenever the character string “TX;” is sent from the computer. The character string “TX;” is called a PC control command.

You can further develop or create a script of the commands using a macro function of the terminal program. Kenwood also provides the remote control program, ARCP-480 at our Web site. You can download the program for free and try it out on your PC. Access <http://www.kenwood.com/i/products/info/amateur.html> and follow the instructions.

PC CONTROL COMMAND

COMPUTER CONTROL COMMANDS

A computer control command is composed of an alphabetical command, various parameters, and the terminator that signals the end of the control command.

EXAMPLE: Command to set VFO A to 7 MHz

Commands can be classified as shown below:

For example, note the following in the case of the FA command (Frequency of VFO A):

- To set the frequency to 7 MHz, the following command is sent from the computer to the transceiver:

“FA00007000000;” **(Set command)**

- To read the frequency of VFO A, the following command is sent from the computer to the transceiver:

“FA;” **(Read command)**

- When the Read command above has been sent, the following command is returned to the computer:

“FA00007000000;” **(Answer command)**

Note:

- Do not use the control characters 00 to 1Fh since they are either ignored or cause a “?” answer.
- Program execution may be delayed while turning the **Tuning** control rapidly.

Alphabetical Commands

A command consists of 2 alphabetical characters. You may use either lower or upper case characters. The commands available for this transceiver are listed in the PC Control Command Tables from page 3.

Parameters

Parameters are used to specify information necessary to implement the desired command. The parameters to be used for each command are predetermined. The number of digits assigned to each parameter is also predetermined. Refer to the Computer Control Commands and the PC Control Command Tables to configure the appropriate parameters.

When configuring parameters, be careful not to make the following mistakes.

(correct parameter: “IS+1000”)

- IS1000; Not enough parameters specified (No direction given for the IF shift)
- IS+100; Not enough digits (Only three frequency digits given)
- IS + 1000; Unnecessary characters between parameters
- IS+10000; Too many digits (Five frequency digits given)

Note: If a particular parameter is not applicable to this transceiver, the parameter digits should be filled using any character except the ASCII control codes (00 to 1Fh) and the terminator (;).

Terminator

To signal the end of a command, it is necessary to use a semicolon (;). The digit where this special character must appear differs depending on the command used.

Error Messages

In addition to the Answer command, the transceiver can send the following error messages.

Error Message	Reason for Error
?;	<ul style="list-style-type: none"> Command syntax was incorrect. Command was not executed due to the current status of the transceiver (even though the command syntax was correct). <p>Note: Occasionally this message may not appear due to microprocessor transients in the transceiver.</p>
E;	A communication error occurred such as an overrun or framing error during a serial data transmission.
O;	Receive data was sent but processing was not completed.

PC CONTROL COMMAND TABLES

AC	Sets or reads the internal antenna tuner status.										Parameters:
Set	1	2	3	4	5	6	7	8	9	10	P1 0: RX-AT THRU 1: RX-AT IN
	A	C	P1	P2	P3	;					
Read	1	2	3	4	5	6	7	8	9	10	P2 0: TX-AT THRU 1: TX-AT IN
	A	C	;								
Answer	1	2	3	4	5	6	7	8	9	10	P3 0: Stop tuning (Set)/ Tuning is stopped (Answer) 1: Start tuning (Set)/ Tuning is active (Answer)
	A	C	P1	P2	P3	;					

AG	Sets or reads the AF gain.										Parameters:
Set	1	2	3	4	5	6	7	8	9	10	P1 0: Always 0 for the TS-480. P2 000 (min.) ~ 255 (max.)
	A	G	P1	P2	P2	P2	;				
Read	1	2	3	4	5	6	7	8	9	10	
	A	G	P1	;							
Answer	1	2	3	4	5	6	7	8	9	10	
	A	G	P1	P2	P2	P2	;				

AI	Sets or reads the Auto Information (AI) function ON/ OFF.										Parameters:
Set	1	2	3	4	5	6	7	8	9	10	P1 0: AI OFF 1: Only old AI format is ON 2: Only extended AI format is ON 3: Both formats are ON
	A	I	P1	;							
Read	1	2	3	4	5	6	7	8	9	10	When the extended AI format is selected, the transceiver automatically sends the parameters. When the old AI is ON and the IF parameters change, the transceiver sends the IF command every 1.5 seconds. When the transceiver is turned OFF, the AI parameter becomes 0.
	A	I	;								
Answer	1	2	3	4	5	6	7	8	9	10	
	A	I	P1	;							

AN	Selects the antenna connector ANT1/ ANT2.										Parameters:
Set	1	2	3	4	5	6	7	8	9	10	P1 1: Selects ANT1 2: Selects ANT2
	A	N	P1	;							
Read	1	2	3	4	5	6	7	8	9	10	
	A	N	;								
Answer	1	2	3	4	5	6	7	8	9	10	
	A	N	P1	;							

AS	Sets or reads the Auto Mode function parameters.										Parameters:
Set	1	2	3	4	5	6	7	8	9	10	P1 0: Always 0 for the TS-480. P2 00 ~ 31: HF ~ 50 MHz band (32 points) P3 Frequency in Hz (11-digit). Unused digit(s) must be 0.

PC CONTROL COMMAND

BC	Sets or reads the Beat Canceller function status.										Parameters: P1 0: Beat Canceller OFF 1: Beat Canceller 1 (BC1) ON 2: Beat Canceller 2 (BC2) ON	
Set	1	2	3	4	5	6	7	8	9	10		
	B	C	P1	;								
Read	1	2	3	4	5	6	7	8	9	10		
	B	C	;									
Answer	1	2	3	4	5	6	7	8	9	10		
	B	C	P1	;								

BD	Moves down the frequency band.										Parameters: None	
Set	1	2	3	4	5	6	7	8	9	10		
	B	D	;									
Read	1	2	3	4	5	6	7	8	9	10		
Answer	1	2	3	4	5	6	7	8	9	10		

BU	Moves up the frequency band.										Parameters: None	
Set	1	2	3	4	5	6	7	8	9	10		
	B	U	;									
Read	1	2	3	4	5	6	7	8	9	10		
Answer	1	2	3	4	5	6	7	8	9	10		

BY	Reads the busy signal status.										Parameters: P1 Transceiver status 0: Not busy 1: Busy P2 Sub-receiver status (Not applicable for the TS-480) 0: Always 0 for TS-480.	
Set	1	2	3	4	5	6	7	8	9	10		
Read	1	2	3	4	5	6	7	8	9	10		
	B	Y	;									
Answer	1	2	3	4	5	6	7	8	9	10		
	B	Y	P1	P2	;							

CA	Sets and reads the CW Auto Zero-beat function status.										Parameters: P1 0: Cancels CW Auto Zero-beat function/ Not active 1: Activates CW Auto Zero-beat function/ Active	
Set	1	2	3	4	5	6	7	8	9	10		
	C	A	P1	;								
Read	1	2	3	4	5	6	7	8	9	10		
	C	A	;									
Answer	1	2	3	4	5	6	7	8	9	10		
	C	A	P1	;								

CH	Move the current VFO frequency 1 step up, using the MULTI control.										Parameters: P1 0: Move the MULTI control 1 step up 1: Move the MULTI control 1 step down In VFO mode, CH command overrides the MHz Up/ Down mode of the TS-480 transceiver.
Set	1	2	3	4	5	6	7	8	9	10	
	C	H	P1	;							
Read	1	2	3	4	5	6	7	8	9	10	
Answer	1	2	3	4	5	6	7	8	9	10	

CN	Sets and reads the CTCSS tone number.										Parameters: P1 00 ~ 41 Refer to page 33 of the TS-480 instruction manual for the CTCSS tone numbers and frequencies.
Set	1	2	3	4	5	6	7	8	9	10	
	C	N	P1	P1	;						
Read	1	2	3	4	5	6	7	8	9	10	
	C	N	;								
Answer	1	2	3	4	5	6	7	8	9	10	
	C	N	P1	P1	;						

CT	Sets and reads the CTCSS function status.										Parameters: P1 0: CTCSS function OFF 1: CTCSS function ON
Set	1	2	3	4	5	6	7	8	9	10	
	C	T	P1	;							
Read	1	2	3	4	5	6	7	8	9	10	
	C	T	;								
Answer	1	2	3	4	5	6	7	8	9	10	
	C	T	P1	;							

DL	Sets and reads the Digital Noise Limiter (DNL) function status.										Parameters: P1 0: DNL function OFF 1: DNL function ON P2 00: DNL Level 1 01: DNL Level 2 02: DNL Level 3
Set	1	2	3	4	5	6	7	8	9	10	
	D	L	P1	P2	P2	;					
Read	1	2	3	4	5	6	7	8	9	10	
	D	L	;								
Answer	1	2	3	4	5	6	7	8	9	10	
	D	L	P1	P2	P2	;					

DN	Emulates the microphone DWN key.										Parameters: P1 00 ~ 99 If no P1 parameter is specified, the command is interpreted as 1 step down. In Memory mode and Quick Memory mode, the command without a parameter is treated as a Memory channel down command. With parameters, it is treated as the frequency down command.
Set	1	2	3	4	5	6	7	8	9	10	
	D	N	P1	P1	;						
Read	1	2	3	4	5	6	7	8	9	10	
Answer	1	2	3	4	5	6	7	8	9	10	

PC CONTROL COMMAND

EX	Sets or reads the Extension Menu.										Parameters:
	Set	1	2	3	4	5	6	7	8	9	
E		X	P1	P1	P1	P2	P2	P3	P4	P5	P2 00: Always 00 for the TS-480
11		12	13	14	15	16	17	18	19	20	P3 0: Always 0 for the TS-480
Read	P5	;									P4 0: Always 0 for the TS-480
	1	2	3	4	5	6	7	8	9	10	P5 A string of characters (Variable length) Normally 1-digit for the TS-480.
	E	X	P1	P1	P1	P2	P2	P3	P4	;	Menu No. 32, 35 and 48 ~ 52 use 2-digit parameters.
Answer	1	2	3	4	5	6	7	8	9	10	Command example: Display brightness EX00000000; (Display illumination OFF). EX00000003; (Display brightness level 3).

PC CONTROL COMMAND

FT	Selects or reads the VFO or M.CH mode of the transmitter.										Parameters: P1 0: VFO A 1: VFO B 2: M.CH									
Set	1	2	3	4	5	6	7	8	9	10	F	T	P1	;						
Read	1	2	3	4	5	6	7	8	9	10	F	T	;							
Answer	1	2	3	4	5	6	7	8	9	10	F	T	P1	;						

When P1=2 is selected for the FR command, the FT command becomes invalid.

FW	Selects or reads the DSP filtering bandwidth.										Parameters: P1 0000 ~ 9999 (in Hz) CW: 0050, 0080, 0100, 0150, 0200, 0300, 0400, 0500, 0600, 1000, 2000 FSK: 0250, 0500, 1000, 1500 SSB/FM/AM: 0000=Normal, 0001=NAR, 0002=NAR2									
Set	1	2	3	4	5	6	7	8	9	10	F	W	P1	P1	P1	P1	;			
Read	1	2	3	4	5	6	7	8	9	10	F	W	;							
Answer	1	2	3	4	5	6	7	8	9	10	F	W	P1	P1	P1	P1	;			

Use the SL or SH command to change the slope tune filter frequencies.

GT	Selects or reads the AGC constant status.										Parameters: P1 000: OFF 001: Fast 002: Slow									
Set	1	2	3	4	5	6	7	8	9	10	G	T	P1	P1	P1	;				
Read	1	2	3	4	5	6	7	8	9	10	G	T	;							
Answer	1	2	3	4	5	6	7	8	9	10	G	T	P1	P1	P1	;				

The GT command cannot be used in FM mode. The transceiver responds with 3 spaces when the GT command is used in FM mode.

ID	Reads the transceiver ID number.										Parameters: P1 020: TS-480									
Set	1	2	3	4	5	6	7	8	9	10										
Read	1	2	3	4	5	6	7	8	9	10	I	D	;							
Answer	1	2	3	4	5	6	7	8	9	10	I	D	P1	P1	P1	;				

IF	Retrieves the transceiver status.										Parameters: P1 Specify the frequency in Hz (11-digit). The blank digits must be "0". P2 5 spaces for the TS-480. P3 RIT/ XIT frequency ±9990 in Hz P4 0: RIT OFF, 1: RIT ON P5 0: XIT OFF, 1: XIT ON P6: Always 0 for the TS-480 (Memory channel bank number). P7: Memory channel number (00 ~ 99). P8 0: RX, 1: TX P9 Operating mode. Refer to the MD commands for details. P10 See FR and FT commands. P11 Scan status. Refer to the SC command. P12 0: Simplex operation, 1: Split operation P13 0: OFF, 1: TONE, 2: CTCSS P14 Tone number (00 ~ 42). Refer to the TN and CN command. P15 A space character for the TS-480.

PC CONTROL COMMAND

KY	Converts the characters into Morse code.										Parameters: P1 0: Character buffer is available 1: Character buffer is not available (Answer command only. A space must be used for the Set command.) P2 Enter characters and numbers. Available characters are: ABCDEFGHIJKLMNOPQRSTUVWXYZ " " (space) 0123456789 " ' () * + , - . / : = ? Special characters: The following ASCII characters can be used in place of the special CW codes. BT=[, AR=_, AS=<, HH=#, SK=>, KN=], BK=\, SN=% The fixed 24-byte length is used for the P2 parameter. " " (space) character must be used for the unused characters. These space characters will not be converted. If all P2 parameter characters are spaces, the transceiver stops sending the message.
